Adults with Type 2 Diabetes

Mounjaro, along with diet and exercise, is proven to lower A1C.

mounjaro.lilly.com

What is Mounjaro?

Mounjaro is an injectable prescription medicine that is used along with diet and exercise to improve blood sugar (glucose) in adults and children 10 years of age and older with type 2 diabetes mellitus.

It is not known if Mounjaro is safe and effective for use in children under 10 years of age.

Select Safety Information

Warning :

Tell your healthcare provider if you get a lump or swelling in your neck, hoarseness, trouble swallowing, or shortness of breath. These may be symptoms of thyroid cancer. In studies with rats, Mounjaro and medicines that work like Mounjaro caused thyroid tumors, including thyroid cancer. It is not known if Mounjaro will cause thyroid tumors, or a type of thyroid cancer called medullary thyroid carcinoma (MTC) in people. Do not take Mounjaro if you or any of your family have ever had MTC or if you have an endocrine system condition called Multiple Endocrine Neoplasia syndrome type 2 (MEN 2).

Mounjaro lowers A1C

For adults with type 2 diabetes along with diet and exercise.

**3 OUT OF 4 ADULTS
REACHED AN**

**A1C UNDER 7%
AND MAINTAINED IT****

*In studies with or without other diabetes medications, 75% to 90% of patients reached an A1C of less than 7%, with an average starting A1C of 7.9% to 8.6% across the 5-mg, 10-mg, and 15-mg doses.

**Study results were measured at 40 and 52 weeks.

Adults taking Mounjaro
lost up to

25 LBS*

Mounjaro is not a weight loss drug.

*Individual results may vary. In studies with or without other diabetes medications, weight loss in adults ranged from 12 lb (5 mg) to 25 lb (15 mg).

Select Safety Information

Mounjaro can cause serious side effects, including:

Inflammation of your pancreas (pancreatitis). Stop using Mounjaro and call your healthcare provider right away if you have severe pain in your stomach area (abdomen) that will not go away, with or without nausea or vomiting. Sometimes you may feel the pain from your abdomen to your back.

Mounjaro works differently

It directly activates GIP and GLP-1 pathways to help regulate blood sugar.

Mounjaro can help your body both regulate blood sugar and decrease how much food you eat.*

*Mounjaro is not a weight loss drug.

Here's more of what you need to know about once-weekly Mounjaro. It's not insulin. **And, Mounjaro may start working to lower blood sugar from the first dose.†**

†The 2.5 mg starting dose is not meant for blood sugar control.

Visit mounjaro.lilly.com to learn about how Mounjaro works.

Select Safety Information

Low blood sugar (hypoglycemia). Your risk for getting low blood sugar may be higher if you use Mounjaro with another medicine that can cause low blood sugar, such as a sulfonylurea or insulin.

Signs and symptoms of low blood sugar may include dizziness or light-headedness, sweating, confusion or drowsiness, headache, blurred vision, slurred speech, shakiness, fast heartbeat, anxiety, irritability, or mood changes, hunger, weakness, and feeling jittery.

What to expect

Everyone's response to Mounjaro is different. Your dose may change if you need additional blood sugar control.

If your doctor has prescribed once-weekly Mounjaro, **you'll start with 2.5 mg.** After 4 weeks, **you'll move on to 5 mg.***

*Mounjaro should be used once each week.

Start

2.5MG
FOR 4 WEEKS

Continue

5MG
FOR AT LEAST
4 WEEKS

Mounjaro has additional dose options—7.5 mg, 10 mg, 12.5 mg, 15 mg. You and your doctor can find the one that's right for you.

The maximum dosage of Mounjaro in adults is 15 mg once-weekly and 10 mg once-weekly in children 10 years of age and older.

Select Safety Information

Serious allergic reactions. Stop using Mounjaro and get medical help right away if you have any symptoms of a serious allergic reaction, including: swelling of your face, lips, tongue or throat, problems breathing or swallowing, severe rash or itching, fainting or feeling dizzy, and very rapid heartbeat.

Managing side effects

Talk to your doctor if you have any side effect that bothers you or does not go away. Everyone can have a different experience, but these are the most common side effects patients had:

- Nausea
- Diarrhea
- Decreased appetite
- Vomiting
- Constipation
- Indigestion
- Stomach pain

In studies, most nausea, vomiting, and diarrhea events occurred while the dose of Mounjaro was being increased. These events decreased over time.

If you experience nausea, your health care provider is your best source for medical advice. In the meantime, some people find the following tips may help:

Eat smaller meals

Avoid fat or fatty foods

Stop eating when you feel full

Try eating bland foods like toast, crackers, or rice

Select Safety Information

Dehydration leading to kidney problems. Diarrhea, nausea, and vomiting may cause a loss of fluids (dehydration), which may cause kidney problems. It is important for you to drink fluids to help reduce your chance of dehydration. Tell your healthcare provider right away if you have nausea, vomiting, or diarrhea that does not go away.

Severe stomach problems. Stomach problems, sometimes severe, have been reported with Mounjaro. Tell your healthcare provider if you have stomach problems that are severe or will not go away.

Next up — How to use and store Mounjaro

Please see **Select Safety Information** throughout the brochure and the **Indication and Safety Summary with Warnings about possible thyroid tumors, including thyroid cancer, on pages 14-15.** Please see [Instructions for Use](#) included with the pen.

A Lilly Medicine

Used once a week

Mounjaro comes in a single-dose pen.

The Mounjaro single-dose pen is activated with the click of a button. Read the **Instructions for Use** included with your pen.

Pick a day. Take Mounjaro on the same day each week. It may help to set a reminder on your phone for this day. If you need to change the day, make sure there are at least 3 days (72 hours) in between doses.

Miss a dose? You can take the dose within 4 days (96 hours) after the missed dose. If more than 4 days have passed, skip the missed dose and take the next dose on the regularly scheduled day.

Do not take 2 doses of Mounjaro within 3 days of each other.

How to use your Mounjaro Pen*

Watch a step-by-step video on using Mounjaro here:
mounjaro.lilly.com/how-to-use

*These are not the complete instructions for using Mounjaro. Before starting Mounjaro, your healthcare provider should show you how to use the pen. [Read the Instructions for Use](#) included with your pen or watch how to use the Mounjaro Pen at mounjaro.lilly.com.

Choose your injection site

- Your healthcare provider can help you choose the injection site that is best for you.
- You or another person can inject the medicine in your stomach or thigh.
- Another person should give you the injection in the back of the upper arm

Pull off the gray base cap

- Make sure the pen is **Locked** until it's on your skin and ready to inject.
- **Pull** the gray base cap off and throw it away in the trash.
- **Do not** put the gray base cap back on and do not touch the needle.

Place on the skin, then Unlock

- **Place** the clear base flat against your skin at the injection site.
- **Unlock** by turning the lock ring.

Press and Hold up to 10 seconds

- **Press and Hold** the purple injection button.
- **Listen** for:
1st click = injection started
2nd click = injection completed
- You will know your injection is complete when the gray plunger is visible.
- After your injection, place the used pen in a sharps container.

Next up — How to use and store Mounjaro (cont'd)

Please see **Select Safety Information** throughout the brochure and the **Indication and Safety Summary with Warnings** about possible thyroid tumors, including thyroid cancer, on **pages 14-15**. Please see **Instructions for Use** included with the pen.

Safe storage and handling

Storing Mounjaro Pens

- Store the pens in their original carton to protect the pen from light.
- Keep Mounjaro in the refrigerator at 36°F to 46°F (2°C to 8°C).
- **Do not** freeze your Mounjaro Pens.
- The pen has glass parts. Handle it carefully. If you drop the pen on a hard surface, **do not** use it. Use a new pen instead.

If you're traveling or will be away from home, Mounjaro can be kept for up to 21 days outside of the refrigerator. Just make sure the temperature doesn't get higher than 86°F (30°C).

Disposing of Mounjaro Pens*

- Safely dispose of your pens in a sharps container.
- If you don't have a sharps container, you can reuse an empty laundry bottle or a coffee can. Just make sure it:
 - Has a closeable lid
 - Is puncture-resistant
 - Is labeled as hazardous waste

*Keep the container out of reach of children. Do not recycle your used sharps container. Check the regulations in your area for how to dispose of the container properly.

Select Safety Information

Gallbladder problems. Gallbladder problems have happened in some people who use Mounjaro. Tell your healthcare provider right away if you get symptoms of gallbladder problems, which may include pain in your upper stomach (abdomen), fever, yellowing of skin or eyes (jaundice), and clay-colored stools.

INDICATION AND SAFETY SUMMARY WITH WARNINGS

Mounjaro® (mown-JAHR-OH) is an injectable medicine for adults and children 10 years of age and older with type 2 diabetes used along with diet and exercise to improve blood sugar (glucose).

◦ It is not known if Mounjaro is safe and effective for use in children under 10 years of age.

Warnings - Mounjaro may cause tumors in the thyroid, including thyroid cancer. Watch for possible symptoms, such as a lump or swelling in the neck, hoarseness, trouble swallowing, or shortness of breath. If you have any of these symptoms, tell your healthcare provider.

- Do not use Mounjaro if you or any of your family have ever had a type of thyroid cancer called medullary thyroid carcinoma (MTC).
- Do not use Mounjaro if you have Multiple Endocrine Neoplasia syndrome type 2 (MEN 2).
- Do not use Mounjaro if you are allergic to it or any of the ingredients in Mounjaro.

Mounjaro may cause serious side effects, including:

Inflammation of the pancreas (pancreatitis). Stop using Mounjaro and call your healthcare provider right away if you have severe pain in your stomach area (abdomen) that will not go away, with or without nausea or vomiting. Sometimes you may feel the pain from your abdomen to your back.

Low blood sugar (hypoglycemia). Your risk for getting low blood sugar may be higher if you use Mounjaro with another medicine that can cause low blood sugar, such as a sulfonylurea or insulin. **Signs and symptoms of low blood sugar may include** dizziness or light-headedness, sweating, confusion or drowsiness, headache, blurred vision, slurred speech, shakiness, fast heartbeat, anxiety, irritability, or mood changes, hunger, weakness and feeling jittery.

Serious allergic reactions. Stop using Mounjaro and get medical help right away if you have any symptoms of a serious allergic reaction, including swelling of your face, lips, tongue or throat, problems breathing or swallowing, severe rash or itching, fainting or feeling dizzy, and very rapid heartbeat.

Dehydration leading to kidney problems. Diarrhea, nausea, and vomiting may cause a loss of fluids (dehydration), which may cause kidney problems. It is important for you to drink fluids to help reduce your chance of dehydration. Tell your healthcare provider right away if you have nausea, vomiting, or diarrhea that does not go away.

Severe stomach problems. Stomach problems, sometimes severe, have been reported in people who use Mounjaro. Tell your healthcare provider if you have stomach problems that are severe or will not go away.

Changes in vision. Tell your healthcare provider if you have changes in vision during treatment with Mounjaro.

Gallbladder problems. Gallbladder problems have happened in some people who use Mounjaro. Tell your healthcare provider right away if you get symptoms of gallbladder problems, which may include pain in your upper stomach (abdomen), fever, yellowing of skin or eyes (jaundice), and clay-colored stools.

Food or liquid getting into the lungs during surgery or other procedures that use anesthesia or deep sleepiness (deep sedation). Mounjaro may increase the chance of food getting into your lungs during surgery or other procedures. Tell all your healthcare providers that you are taking Mounjaro before you are scheduled to have surgery or other procedures.

Common side effects

The most common side effects of Mounjaro include nausea, diarrhea, decreased appetite, vomiting, constipation, indigestion, and stomach (abdominal) pain. These are not all the possible side effects of Mounjaro. Talk to your healthcare provider about any side effect that bothers you or doesn't go away.

Tell your healthcare provider if you have any side effects. **You can report side effects at 1-800-FDA-1088 or www.fda.gov/medwatch.**

INDICATION AND SAFETY SUMMARY WITH WARNINGS (CON'T)

Before using Mounjaro

- **Your healthcare provider should show you how to use Mounjaro before you use it for the first time.**
- **Talk to your healthcare provider about low blood sugar and how to manage it.**
- **If you take birth control pills by mouth, talk to your healthcare provider before you use Mounjaro. Birth control pills may not work as well while using Mounjaro.** Your healthcare provider may recommend another type of birth control for 4 weeks after you start Mounjaro and for 4 weeks after each increase in your dose of Mounjaro.

Review these questions with your healthcare provider:

- Do you have other medical conditions, including problems with your pancreas, or severe problems with your stomach, such as slowed emptying of your stomach (gastroparesis) or problems digesting food?
- Do you take other diabetes medicines, such as insulin or sulfonylureas?
- Do you have a history of diabetic retinopathy?
- Are you scheduled to have surgery or other procedures that use anesthesia or deep sleepiness (deep sedation)?
- Are you pregnant, plan to become pregnant, breastfeeding, or plan to breastfeed? It is not known if Mounjaro will harm your unborn baby. Mounjaro may pass into your breast milk.
- Do you take any other prescription medicines or over-the-counter drugs, vitamins, or herbal supplements?

How to take

- Read the **Instructions for Use** that come with Mounjaro.
- Use Mounjaro exactly as your healthcare provider says.
- A caregiver may give you Mounjaro injections, or you may self-inject if a healthcare provider determines that it is appropriate.
- Inject Mounjaro under the skin (subcutaneously) of your stomach (abdomen), thigh, or another person should inject in the back of the upper arm. **Do not** inject Mounjaro into a muscle (intramuscularly) or vein (intravenously).
- **Use Mounjaro 1 time each week, at any time of the day.**
- **Do not** mix insulin and Mounjaro together in the same injection.
- You may give an injection of Mounjaro and insulin in the same body area (such as your stomach area), but not right next to each other.
- Change (rotate) your injection site with each weekly injection. **Do not** use the same site for each injection.
- If you take too much Mounjaro, call your healthcare provider or Poison Help line at 1-800-222-1222 or go to the nearest hospital emergency room right away.

Learn more

Mounjaro is a prescription medicine available as a pre-filled single-dose pen in 2.5 mg, 5 mg, 7.5 mg, 10 mg, 12.5 mg, or 15 mg per 0.5 mL injection. For more information, call 1-800-LillyRX (800-545-5979) or go to www.mounjaro.lilly.com.

This summary provides basic information about Mounjaro but does not include all information known about this medicine. Read the information that comes with your prescription each time your prescription is filled. This information does not take the place of talking with your healthcare provider. Be sure to talk to your healthcare provider about Mounjaro and how to take it. Your healthcare provider is the best person to help you decide if Mounjaro is right for you.
